PANKAJ VYAS / SOFTWARE DEVELOPER

ABOUT PANKAJ

Pankaj is a software developer, who thrives in bringing ideas to life. He has expertise in **Java & J2EE**. He has 2 years of experience in Java. And he can work with Backend as well as Frontend technologies.

At heart, Pankaj do poetry. He is a kind, happy person who will bring positivity to any environment.

PROJECTS

Door Store: A Frontend application which is created with REACT. I've created this app with small reusable react components. This app uses **redux** for state management. I've implemented sign-in and sign-out functionality with the help of **Firebase**.

Email Sender: It is a REST API that will help user to send emails. If user wants to send Lots of email to multiple users. To provide this functionality, I've created this REST API that will extract email details from excel file and it will send emails.

Reporting Tool: A tool that lets the programmer generate reports without writing code for it. The tool provides the model with data and the API, which will generate the pdf files by loading the design from the template and replacing the dynamic variables with data from model. Letting user to only design template in the designer and place variables in the template.

EDUCATION

B.E. Computer Science from Mahakal Institute of Technology Ujjain (2019)

Intermediate from Jawahar Navodaya Vidyalaya Ratlam (2015)

WORK EXPERIENCE

Associate Software Engineer at OpenText

Aug 2019

I work on Composer; it is an Eclipse-based RCP product that provides functionality to create and customize applications for Content Server. Development activity is entirely owned by me. Along with Composer, I also handle Web Services; where we have a set of services based on J2EE specification, that enable service-oriented programmatic access to the Content Server.

Intern at OpenText

March 2019 - July 2019

I was working on an Integrated Workflow Management Application. Where we are automating the creation of HTML forms. And there we need to calculate the differences between two excel files that contains meta data. Doing that manually would be very time-consuming thing. So, I did an automation for calculating differences. And it really helped us and improve the process. Earlier that calculating process was taking 1 hr. approx. But after I automate the process, and it was calculating in seconds.

Intern at Thinking Machines

Aug 2017 - Aug 2018

I had a training in Neural Network API in **C** and developed a **Python** Web Framework. I have created an application that creates Java Beans from **SQL** table meta data using Java Reflection API (like what we use in **ORM** framework).
