Summary

Senior Java Developer with 6+ years' experience building scalable microservices, cloud-native applications, and distributed systems. Skilled in modernizing legacy platforms, optimizing cloud deployments, and implementing event-driven architectures. Known for rapid prototyping ("vibe coding")—leveraging creativity and AI-assisted tools (ChatGPT, IntelliJ AI, Warp, Cursor) to accelerate development, boost productivity, and transform ideas into impactful solutions.

Technical Skills

- **Languages & Frameworks:** Java (Expert), Python, Spring Boot, J2EE, JUnit, Mockito, SQL, REST APIs
 - **Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, Helm, Jenkins, Git
 - **Monitoring & Messaging:** Kafka, FluentD, New Relic, Ingress
 - **Web & UI:** React, HTML, CSS, Postman
 - **Security & Compliance:** Fortify, Blackduck, OWASP
 - **Development Practices:** Agile/Scrum, CI/CD, Design Patterns, Distributed Systems
-

Experience

Senior Software Engineer | Reltio, Bengaluru

Dec 2024 – Present

- Build and customize multi-tenant Master Data Management (MDM) templates (Velocity Packs) tailored to various industry domains (e.g., insurance, healthcare).
- Developed microservices to automate the onboarding, updating, and lifecycle management of client-specific data environments ("tenants") in an MDM system.
- Created Java-based microservices for replicating tenant data and configurations by cloning Google Cloud Spanner and Azure Cosmos DB instances.
- Implemented post-creation customization capabilities, enabling users to fine-tune tenant configurations based on specific business requirements.

Senior Software Engineer | OpenText, Bengaluru

Aug 2023 – Dec 2024

- Designed and deployed scalable, cloud-native microservices on Google Kubernetes Engine (GKE), leveraging Helm charts and Ingress controllers for efficient deployment, routing, and configuration management.
- Built end-to-end real-time data streaming pipelines using Apache Kafka to enable event-driven architecture and improve data flow between services. Integrated New Relic to monitor service health and track performance metrics.

Software Engineer | OpenText, Bengaluru
Oct 2021 – Aug 2023

- Developed custom Python tooling to automate upgrades of legacy Java libraries across multiple projects, enabling faster maintenance cycles and reducing manual effort in systems without package managers.
- Engineered scalable cloud logging pipelines using Graylog, Apache Kafka, and FluentD to centralize logs, support real-time debugging, and enhance observability across distributed systems.
- Modernized key Documentum platform components—including Documentum Messaging Server (DMS), Documentum Foundation Services (DFS), and Accelerated Content Server (ACS)—by upgrading the Java runtime to version 21, migrating to Spring Framework 6, and updating to Tomcat 10, resulting in improved compatibility, security, and overall system performance.

Associate Software Engineer | OpenText, Bengaluru
Aug 2019 – Sep 2021

- Contributed to the development and enhancement of Documentum Composer, an Eclipse Rich Client Platform (RCP) application, improving user experience and extending functionality for enterprise content management.
 - Upgraded the Java runtime environment from version 8 to 17+, implementing performance optimizations and new features.
-

Projects

Stock Analyzer with MCP | Python, MCP, Gemini, yFinance

- Built a Python-based tool enabling users to **query and compare real-time stock prices using natural language**.
- Integrated **yFinance** for market data, **Google Gemini** for query interpretation, and **MCP (Model Context Protocol)** for seamless tool connectivity.
- Delivered a working demo showcasing **AI-driven financial data analysis** ([demo link](#)).

Data Streaming to New Relic Dashboard | Kafka, FluentD, Docker

- Designed a **real-time data streaming pipeline** to forward **Kafka event data** into **New Relic dashboards** using **FluentD log forwarder**.
 - Improved **observability and monitoring** across distributed systems by enabling live metrics and alerts.
 - Deployed solution via **Docker**, reducing setup time and improving reliability.
-

Education

Bachelor of Engineering – Computer Science & Engineering
MIT Group of Institutes, Ujjain (2015 – 2019)

Intermediate (Mathematics & Computer Science)
Jawahar Navodaya Vidyalaya, Ratlam (2013 – 2015)
