PROFESSIONAL SUMMARY

Senior Backend Engineer with 7+ years of experience designing and operating large-scale distributed systems, microservices, and cloud-native platforms. Deep expertise in Java, Spring Boot, event-driven architectures (Kafka), and multi-cloud deployments (GCP, Azure). Proven ability to drive architectural decisions, lead end-to-end delivery of complex cross-functional initiatives, mentor engineers, and establish engineering standards. Track record of migrating legacy on-premise platforms to scalable cloud infrastructure and resolving critical production incidents at scale.

TECHNICAL SKILLS

Languages: Java, Python, SQL, Go (Learning)

Frameworks: Spring Boot, Spring Framework 6, REST APIs, Microservices

Distributed Systems & Messaging: Kafka, event-driven architecture, real-time data streaming, Fluentd

Cloud & DevOps: GCP (Cloud Functions, Spanner), Azure, Docker, Kubernetes (GKE), Helm, CI/CD

Databases: Google Cloud Spanner, Azure Cosmos DB, MySQL, SQL schema design & tuning

Observability: New Relic, Graylog, Airflow

Security: Fortify, BlackDuck, vulnerability management, access control

Testing & Tools: JUnit, Mockito, Git, Cursor, Agile/Scrum

AI/ML: LLM, GenAI Agents, Model Context Protocol (MCP), Machine Learning

EXPERIENCE

Senior Engineer

Dec 2024 – Present

Reltio (now SAP)

Bengaluru, India

- Architected distributed Java services to automate tenant provisioning for a large-scale MDM platform, reducing environment setup time from several hours to under 40–50 minutes.
- Designed and owned a multi-tenant lifecycle management system enabling on-demand creation, updates, and teardown of isolated environments, significantly reducing operational overhead.
- Built GCP Cloud Functions for free-tier tenant self-serve provisioning, enabling external developer onboarding without manual intervention.
- Engineered bidirectional data replication between Google Cloud Spanner and Azure Cosmos DB, ensuring consistency across cloud boundaries for multi-tenant environments.
- Designed industry-specific MDM templates for insurance and healthcare verticals, accelerating enterprise customer go-live timelines.

Senior Software Engineer

Aug 2023 – Dec 2024

OpenText

Bengaluru, India

- Owned end-to-end quarterly releases for five enterprise products, including build orchestration and security vulnerability scanning (Fortify, Black Duck), in close collaboration with platform, QA, and DevOps teams.
- Migrated a legacy on-premise product to cloud infrastructure, managing RMI services within Tomcat and designing a cloud-agnostic deployment architecture supporting multiple cloud providers.
- Implemented centralized logging pipeline using Fluentd to forward application logs to New Relic dashboards, enabling proactive monitoring, failure detection, and automated alerting – improving incident response time.

Software Engineer

Oct 2021 – Aug 2023

OpenText

Bengaluru, India

- Built Python automation tooling to upgrade Java dependencies across 5+ large monolithic enterprise products, significantly reducing manual upgrade effort.
- Led platform modernization of Documentum by upgrading to Java 17, Spring Framework 6, and Tomcat 10 – improving runtime stability and security posture.
- Migrated .NET and C++ projects from Visual Studio 2013 to 2019, resolving build dependencies and enabling modern toolchain support.
- Implemented centralized logging via Graylog and added root squash / non-root squash support in cloud deployments, enhancing security and operational visibility.

Associate Software Engineer

Aug 2019 – Sep 2021

OpenText

Bengaluru, India

- Contributed to Documentum Composer (Eclipse RCP), delivering feature improvements used by enterprise clients worldwide.
- Executed Java 8 to Java 11 runtime upgrade across critical platform components, improving performance and enabling modern Java feature adoption.
- Collaborated with senior engineers on production issue triage, developing strong debugging and root-cause analysis skills.

Software Engineering Intern

Mar 2019 – Aug 2019

OpenText

Bengaluru, India

- Built HTML form generation automation as part of an Integrated Workflow Management application, reducing manual form creation effort for the engineering team.

SIDE PROJECTS

Stock Analyzer with MCP

Python, MCP, Google Gemini, yFinance

- Built a Python tool enabling natural language queries over real-time stock prices, integrating yFinance for market data, Google Gemini for query interpretation, and MCP for tool connectivity.

Data Streaming to New Relic Dashboard

Kafka, Fluentd, Docker

- Designed a real-time pipeline forwarding Kafka event data into New Relic dashboards via Fluentd; deployed via Docker, improving observability across distributed systems.

EDUCATION

Bachelor of Engineering – Computer Science

Aug 2015 – May 2019

Mahakal Institute of Technology, Ujjain, India

CERTIFICATIONS

Implementation of GenAI Agents | Machine Learning | Model Context Protocol (MCP) Mastery | React Developer | JavaScript: The Advanced Concepts
